

Michal Fingerut

☎ 054-239-8171 | ✉ michfingerut@gmail.com | [GitHub](#) | [LinkedIn](#)

Successfully transitioned from optometry to software development, demonstrating strong adaptability and a fast learning curve. Results-driven, AI-driven developer with experience leading impactful projects, passionate about innovative technologies and collaborative problem-solving. Check my [portfolio](#).

WORK EXPERIENCE

Pango

Back end developer

2025 – present

- Domain owner of the **EvCharge** service, responsible for electric vehicle charging flows in a complex production environment combining both software and hardware-related challenges. Working with **Python, MongoDB, AWS, Lambda, message queues- SQS and DLQ, SNS, SSM, Api gateways, CloudWatch, Coralogix, DynamoDB, serverless architecture, microservices, and nano-services architecture**.
- Led the ongoing maintenance and evolution of the domain, including designing and implementing new features, resolving production issues, and supporting internal teams as well as external vendors.
- Led the architecture and development of an internal multi-agent bot designed to centralize and expose domain knowledge across the company. Owned the overall architecture and most of the implementation, defined the development patterns and guidelines used by other teams to build their specialist agents, and deployed the agents on **AWS EKS** and **EC2**. The agent ecosystem included in-house wrappers around **Cursor CLI** as well as native **Cursor Agents**.
- Actively **AI-oriented** in day-to-day development, leveraging **Cursor** and **Claude Code**, and creating internal skills, commands, roles, and agents to optimize workflows and share best practices across the team.
- Designed and implemented agentic development workflows using a fleet of specialized sub-agents to support the end-to-end implementation of new features in the EvCharge domain, from analysis and planning through development and validation.
- Delivered new features involving complex deployments across multiple microservices simultaneously, while ensuring system stability and continuity in production.
- Improved observability and incident response by implementing alerts and monitoring flows to detect bugs in real time and enable faster investigation and resolution.
- Developed a full-stack internal application using also **Docker** and **React** to create semi-automated processes, enabling non-technical stakeholders to perform domain-related operations independently.

Infinity Labs R&D

Back end developer (Infrastructure team)

2024 – 2025

- Part of the core development team responsible for architecture, company-wide development standards, and infrastructure of multiple microservices using **JavaScript, TypeScript, Node.js, Express, Sequelize, Mongoose, Vue.js, React, PostgreSQL, MongoDB, and REST APIs**.
- Developed and maintained a microservice for guest user invite management using **Node.js, Express, Mongoose, MongoDB, and Docker**.

Full Stack developer- Back end oriented (Dashboard team)

2022 – 2024

- Oversaw the development lifecycle of an educational SaaS web application using **JavaScript, TypeScript, Node.js, Express, Socket.IO, Sequelize, Vue.js, and PostgreSQL**, including designing **REST APIs**, implementing features (including database migrations), and maintaining the system in a **Linux**-based environment; served as the main developer, defining workflows and development guidelines, and acting as the primary point of contact for technical support.
- Optimized system performance and improved response times by 80% using advanced monitoring techniques and efficient coding practices, including design patterns.
- Refactored the backend by independently rewriting all services to extract the core framework, maintaining server functionality while significantly improving performance, scalability, and the overall development process.

EDUCATION

Software Development Extensive Bootcamp

Infinity Labs R&D

2022

BSC Optometry (Cum Laude)

Bar Ilan University

2019- 2022

ADDITIONAL

Technical Skills: Python, JavaScript, TypeScript, C, Java, Node.js, Express, FastApi, Nest.js, React, Vue.js, AWS, AWS Lambda, AWS SQS, AWS SNS, AWS SSM, CloudWatch, Coralogix, Tailwind, Playwright, Jest, Socket.IO, Sequelize, Mongoose, PostgreSQL, MongoDB, DynamoDb, Microservices and Nanoservices Architecture, Services Oriented Architecture (SOA), Serverless Architecture, Event-driven architecture, REST APIs, OOP, Design Patterns, Multi Threading, Docker, Linux, Scrum Environment, SQL, NoSQL, SaaS, LLM Integration, AI-assisted Development (Cursor, Claude Code)

Languages: Hebrew-Native, English-Fluent.

Army Service: Linkage & Recruitment NCO, Air Force, IDF
